SmartDownload

If you spend a significant amount of time downloading files, you've probably run into the common problems of broken downloads and slow connections. This application gives you the ability to pause and resume downloads, useful if you'd like to use the phone and you have only a single line. If you lose your modem connection during a download, the utility will detect the connection loss and automatically pause your download. Once you reconnect to your ISP, click the Resume button to continue the download from where you left off. [go to download site](#)
